

## ABSTRACT

The present invention provides a media data display device, a media data display method and a media data display program for displaying, on a display screen, multimedia data made up of a plurality of media including moving images in a variety of display methods. The media data display device (85) is a media data display device for displaying, on a display screen, multimedia data made up of a plurality of media including moving images, and is provided with a scaling determining portion (87), a scaling portion (89) and a display portion (19). The scaling determining portion (87) determines whether to display the moving images after changing their image size or to display the moving images without changing their image size. The scaling portion (89) and the display portion (19) are means for displaying the multimedia data, and display the moving images after switching whether to perform scaling or not based on a determination result from the scaling determining portion (87).
